

Appendix

Table A1
Results of bivariate relationships between career exploration and demographic variables

Demographic variable	Career exploration dimension	<i>k</i>	<i>N</i>	<i>r</i>	<i>r_c</i>	<i>SD_c</i>	95% CI	80% CR	cor(<i>r</i> , <i>a</i>)
Age	Career exploration	27	6,022	.05	.06	0.09	.02, .09	-.01, .12	.82
	Env. exploration	14	2,304	.02	.02	0.12	-.05, .09	-.09, .13	.73
	Self-exploration	14	2,304	.08	.09	0.09	.04, .14	.05, .13	.95
Gender	Career exploration	19	4,120	.00	.00	0.05	-.03, .02	.00, .00	1.00
	Env. exploration	10	1,878	-.02	-.02	0.07	-.07, .02	-.02, -.02	1.00
	Self-exploration	10	1,878	.00	.00	0.07	-.05, .05	.00, .00	1.00
Socioeconomic status	Career exploration	8	2,299	.03	.03	0.12	-.05, .11	-.10, .16	.53
	Env. exploration	3	691	-.05	-.06	0.01	-.07, -.04	-.06, -.06	1.00
	Self-exploration	3	691	-.05	-.06	0.09	-.28, .16	-.16, .05	.80

Note. Age = chronological age in years; *k* = number of independent samples; *N* = cumulative sample size; *r* = sample size-weighted correlation; *r_c* = sample size-weighted and reliability-corrected correlation; *SD_c* = standard deviation of *r_c*; CI = confidence interval for *r_c*; CR = credibility interval; cor(*r*, *a*) = correlation between *r* and statistical artifacts.

Table A2

Results of a meta-analytic multivariate regression model with career exploration as outcome variable

Predictor	<i>B</i>	<i>SE_B</i>	<i>t</i>	<i>p_B</i>	Raw <i>RW</i>	RS <i>RW</i>	<i>R</i> ²	ΔR^2	<i>p_{ΔR²}</i>
CSE	0.36	0.02	15.19	<.001	0.15	50.767%	.224		
Career-exploratory goals	0.32	0.03	12.63	<.001	0.122	41.078%	.294	.070	<.001
Outcome expectations	-0.06	0.03	-2.25	.024	0.024	8.155%	0.296	.002	<.001

Note. CSE = self-efficacy for career exploration and decision-making; *B* = regression weight; *SE_B* = standard error of *B*; *RW* = relative weight; RS = rescaled.

Table A3*Results of categorical moderator analyses*

Criterion variable	Moderator	<i>k</i>	<i>N</i>	<i>r</i>	<i>r_c</i>	95% CI	80% CR

Note. *k* = cumulative number of independent samples; *N* = cumulative sample size; *r* = sample size-weighted correlation; *r_c* = sample size-weighted and reliability-corrected correlation; CI = confidence interval for *r_c*; CR = credibility interval.

^aStumpf, S. A., Colarelli, S. M., & Hartman, K. (1983). Development of the career exploration survey (CES). *Journal of Vocational Behavior*, 22(2), 191–226.

^bFor the sake of completeness, all moderator levels were included; we interpret moderation effects only if moderator levels include $k \geq 3$ independent samples.

Table A4*Results of Wald-type pairwise comparisons for each level of categorical moderators*

Criterion variable	F	r_{c1}	r_{c2}	Diff.	95% CI
Publication status: <i>Unpublished</i> (r_{c1}) compared to <i>published</i> (r_{c2})					
CSE	1.55	.47	.55	-.08	-.22, .05
Career-exploratory goals	0.63	.36	.45	-.09	-.34, .16
Career barriers	18.11	.04	-.19	.23	.11, .35
Career decidedness	0.03	.21	.22	-.01	-.19, .16
Decisional distress	0.76	-.17	-.07	-.10	-.33, .13
CE scale: <i>Stumpf</i> (r_{c1}) compared to <i>other</i> (r_{c2})					
CSE	0.53	.51	.56	-.05	-.19, .09
Career support	1.99	.37	.24	.13	-.08, .33
Career decidedness	1.73	.17	.27	-.09	-.24, .05
Decisional distress	0.42	-.07	-.11	.05	-.10, .19

Note. CSE = self-efficacy for career exploration and decision-making; r_{c1} and r_{c2} = sample size-weighted and reliability-corrected correlation for moderator category 1 and 2, respectively; Diff. = Mean difference, CI = confidence interval.

Table A5

Contrasts for the comparison of the relationship between career exploration and criteria variables for different criteria subcategories

Criterion variable	Subcategory 1	Subcategory 2	r_{c1}	r_{c2}	Diff.	95% CI
Outcome expectations (OE)	OE for env. exploration	Overall OE	.28	.27	.01	-.19, .20
	OE for env. exploration	OE for self-exploration	.28	.35	-.07	-.30, .15
	Overall OE	OE for self-exploration	.27	.35	-.08	-.28, .12
Career-related social support	Family support	Institutional support	.27	.41	-.14	-.41, .13
	Family support	Peer support	.27	.45	-.18	-.53, .17
	Family support	Unspecific support	.27	.08	.19	-.02, .41
	Institutional support	Peer support	.41	.45	-.04	-.50, .41
	Institutional support	Unspecific support	.41	.08	.33	.02, .65
	Peer support	Unspecific support	.45	.08	.38	-.04, .79
Career-related barriers	Overall barriers	Social barriers	-.15	-.11	-.03	-.28, .22
Career decidedness and decision-making difficulties (<i>reverse</i>)	Career decidedness	Decision-making difficulties (<i>reverse</i>)	.34	.16	.18	.04, .31
Decisional distress	Career self-doubt	Commitment anxiety	-.16	-.06	-.10	-.24, .05
	Career self-doubt	Decisional stress	-.16	.10	-.26	-.45, -.06
	Commitment anxiety	Decisional stress	-.06	.10	-.16	-.34, .02

Note. r_{c1} and r_{c2} = sample size-weighted and reliability-corrected correlation for subcategory 1 and 2, respectively; Diff. = Mean difference, CI = confidence interval.

Table A6*Results of meta-regressions*
